Summary

Software Engineer with 1+ year of hands-on experience in automating, developing backend and frontend applications.

Education

D. G. Ruparel College of Arts, Science and Commerce

Bachelor of Science - Information Technology | GPA: **9.40**

Mumbai, India

2022 - 2025

- **Achievements:** 1st Place - DotTech Hackathon | 2nd Place - Code Relay Event

Projects

ClassAccess - AI Powered Classroom Platform | **Prod, Live** | Python, Django REST Framework, React, PostgreSQL

- Built Python REST APIs with JWT authentication and role-based access control (**RBAC**).
- Integrated Supabase storage with signed URLs for file upload and access management.
- Implemented **RAG pipeline** enabling semantic search, page-level retrieval, chunking, and embedding-based retrieval using cloud-based **vector storage** for scalable AI workflows.
- Built an LLM-powered question answering system with text preprocessing and metadata handling, solving **low-context retrieval** issues and achieving **3x faster** RAG processing per PDF.
- Improved system performance and reliability using **Redis caching**, rate limiting, background jobs, and **Docker** based deployment on Render and Vercel.

Karzo - Event Ride Sharing Platform | Python, Django REST Framework, Vue.js, MySQL

- Built REST APIs using Python programming and **Django REST Framework** with JWT authentication.
- Resolved **N+1** query issues using Django ORM.
- Reduced redundant search API calls using debouncing (**10 to 2-4** per request cycle).
- Integrated **OpenAI LLM** for automated event description generation.

Internship Experience

Backend Engineer | Kuvaka Tech (Remote)

June 2025 - July 2025

- Built email verification APIs using **Python programming** and **Django REST Framework**, integrating third-party verification APIs with multi-step SMTP validation logic.
- Implemented asynchronous background processing using **Celery** for bulk jobs, retries, and cleanup.
- Applied **rate limiting**, and API debugging to improve system reliability.

Full Stack Web Developer | Levaze Digital (Remote)

April 2024 - June 2024

- Developed server-side rendered web features using **Python, Flask** with Jinja templates, HTML, CSS, and JavaScript.
- Implemented authentication features including OTP flows and Google OAuth-based signup and login.
- Used Git and GitHub for version control, branching, and collaborative development.

Technical Skills

Languages: Python, JavaScript, Java, C/C++

Backend: Django, Django REST Framework, Flask, FastAPI, Celery, Node.js, Express.js

Databases & Caching: PostgreSQL, MySQL, SQLite, Redis

Frontend: React.js, Vue.js, HTML, CSS, Tailwind CSS, Bootstrap, Jinja Templates

DevOps & Tools: Docker, Git, GitHub, Linux, Postman, Render, Vercel, AWS (Basic)

Backend Concepts: REST APIs, Authentication (JWT), ORM, Query Optimization, Schema Design, Rate Limiting

AI / LLM: RAG, LlamaIndex, Vector Search, LLM Integration
